**Broadband as a Video Platform** Judith O'Neill 2014-02-05 This volume features contributions from a conference held in Lusaka, Zambia, to explore the role and prospects of broadband in Africa as a video platform—with emphasis on the strategies and building blocks for deployment and advancement. While it may seem that such networks and their applications are not a realistic scenario for developing countries, it would be short-sighted and economically dangerous to ignore the emerging trends. The pace of introduction of next-generation networks in industrialized countries is rapid and the developing world will not be able to stand aside. The risks of falling behind are great and in any country there will be elements of business and society who wish to forge ahead. Policymakers and network architects need to be prepared. Media companies and broadcasters, in particular, must be alert to the new developments as should be medical and educational institutions. The availability of advanced high-speed business application tools in a country will affect its participation in international transactions and its economic growth. This volume features contributions from industry leaders, policymakers and scholars, representing a variety of perspectives, including technology and infrastructure management, economic development, marketing, education and health. The authors collectively discuss how broadband deployment as a platform with sufficient speed for video may be encouraged by public policy and regulation and how investment in broadband for this and related purposes can improve the quality of life and experience in Sub Saharan Africa in media and data, while being a financeable, commercially sound business.

Regulieren oder Nichtregulieren; das ist hier die Frage Markus A. Hessler 2015-03-27 Die Telekommunikationsmärkte zeigen – nicht zuletzt aufgrund der Konvergenz von Telekommunikation, Internet, Medien und Unterhaltung und der Konsolidierungstendenzen – weiterhin eine ungebrochene Dynamik. Über 15 Jahre nach der Liberalisierung der Telekommunikationsmärkte sind die vertikal integrierten staatlichen Monopole weitgehend wettbewerblichen Märkten gewichen – mit überaus positiven Folgen für die Volkswirtschaft und die Konsumenten. Die Telekommunikation hat eine große und weiter zunehmende Bedeutung sowohl für das Privat- als auch für das Berufsleben der Menschen und darüber hinaus für die gesamtwirtschaftliche und -gesellschaftliche Entwicklung. Mit immer besseren Endgeräten und leistungsfähigeren Anwendungen steigt auch die Nachfrage nach schnelleren und besseren Internetzugängen. Im Zusammenhang mit leistungsfähigeren Internetzugängen ist auch die Entwicklung der Next Generation Networks (NGN) und des Next Generation Access (NGA) bedeutend, da es sich bei diesen um neue bessere Netzarchitekturen handelt. Die hohe Bedeutung moderner Breitbandanschlüsse für die volkswirtschaftliche Entwicklung erklärt auch die starke Involvement von Politik, Öffentlichkeit, Wirtschaft und Wissenschaft in die Diskussionen um Fragen des Breitbandausbaus und der Netzneutralität. In dem vorliegenden Werk werden zunächst die relevanten Marktentwicklungen und technische Grundlagen der Telekommunikation behandelt. Im wirtschaftswissenschaftlichen Grundlagenteil wird analysiert, unter welchen Bedingungen in einer Marktwirtschaft ein Staatseingriff gerechtfertigt und geboten ist. Dabei werden Grundlagen der Marktwirtschaft und Ordnungswirtschaft, die normative Theorie der Regulierung, Ergebnisse, Regulierungsgrundlagen, die positive Theorie der Regulierung und die Netzökonomie erläutert. Im letzten Teil der Arbeit werden die Telekommunikationsmärkte auf ebendiese Bedingungen untersucht und Empfehlungen gegeben, welche Probleme mit welchen Maßnahmen behandelt werden sollten. Dabei geht es um Fragen der Regulierung der „letzten Meile“, der Netzneutralität, des Breitbandausbaus, um Externalitäten und Informationsmärkte.

**mHealth** Donna Malvey 2014-07-14 This book defines the phenomenon of mHealth and its evolution, explaining why an understanding of mHealth is critical for decision makers, entrepreneurs and policy analysts who are pivotal to developing products that meet the collaborative health information needs of consumers and providers in a competitive and rapidly-changing environment. The book examines trends in mHealth and discusses how mHealth technologies offer opportunities for innovators and entrepreneurs, those who often are industry first-movers with regard to technology advancement. It also explores the changing dynamics and relationships among physicians, patients, insurers, regulators, managers, administrators, caregivers and others involved in the delivery of health services. The primary focus is on the ways in which mHealth technologies are revising and reshaping healthcare delivery systems in the United States and globally and how those changes are expected to change the ways in which the business of healthcare is conducted. mHealth: Transforming Healthcare consists of nine chapters that address key content areas, including history (to the extent that dynamic technologies have a history), projection of immediate evolution and consistent issues associated with health technology, such as security and information privacy and government and industry regulation. A major point of discussion addressed is whether mHealth is a transient group of products and a passing patient encounter approach, or if it is the way much of our health care will be delivered in future years with incremental evolution to achieve sustainable innovation of health technologies.

**Promoting Competition in Innovation Through Merger Control in the ICT Sector** Kalpana Tyagi 2019-06-21 This book addresses the question of how competition authorities assess mergers in the Information Communication Technology (ICT) sector so as to promote competition in innovation. A closer look at the question reveals that it is far more complex and difficult to answer for the ICT, telecommunications and multi-sided platform (MSP) economy than for more traditional sectors of the economy. This has led many scholars to re-think and question whether the current merger control framework is suitable for the ICT sector, which is often also referred to as the new economy. The book pursues an interdisciplinary

approach combining insights from law, economics and corporate strategy. Further, it has a comparative dimension, as it discusses the practices of the US, the EU and, wherever relevant, of other competition authorities from around the globe. Considering that the research was conducted in the EU, the practices of the European Commission remain a key aspect of the content. Considering its normative dimension, the book concentrates on the substantive aspects of merger control. To facilitate a better understanding of the most important points, the book also offers a brief overview of the procedural aspects of merger control in the EU, the US and the UK, and discusses recent amendments to Austrian and German law regarding the notification threshold. Given its scope, the book offers an invaluable guide for competition law scholars, practitioners in the field, and competition authorities worldwide.

**Multipath TCP for User Cooperation in Wireless Networks Dizhi Zhou 2014-11-24** This brief presents several enhancement modules to Multipath Transmission Control Protocol (MPTCP) in order to support stable and efficient multipath transmission with user cooperation in the Long Term Evolution (LTE) network. The text explains how these enhancements provide a stable aggregate throughput to the upper-layer applications; guarantee a steady goodput, which is the real application-layer perceived throughput; and ensure that the local traffic of the relays is not adversely affected when the relays are forwarding data for the destination. The performance of the proposed solutions is extensively evaluated using various scenarios. The simulation results demonstrate that the proposed modules can achieve a stable aggregate throughput and significantly improve the goodput by 1.5 times on average. The brief also shows that these extensions can well respect the local traffic of the relays and motivate the relay users to provide the relaying service.
