From Space to Sea Abraham E. Muthunayagam 2022-06-30 In 2008, with the successful launch of Chandrayaan-1, India's first mission to the Moon, the Indian Space Research Organisation (ISRO) joined an elite space club. The foundation of this achievement, however, was laid decades ago by a small group of people, one of whom was Dr Abraham E. Muthunayagam. Handpicked by Dr Vikram Sarabhai, Muthunayagam was the chief architect of rocket propulsion in the country, directing the project that developed the Vikas engine, which sent many Indian rockets into space, including the one that took Chandrayaan-1 to the Moon. In From Space to Sea and Beyond, Muthunayagam looks back at the nascent phase of the Indian space programme, the breakthroughs, international collaborations, and professional rivalries and jealousies that were the highlight of his years at ISRO. Though he was eventually transferred from the organization, it did not signal the end of his career. Just like propulsion systems land up in the ocean after completing their missions in space, Muthunayagam too joined, and subsequently transformed, the Department of Ocean Development. A riveting mix of memoir and history, this book is an inspiring call to young Indians to carry forward the spirit of enquiry.

A Constrained Space Exploration Technology Program National Research Council 2009-01-29 In January 2004, President George W. Bush announced the Vision for Space Exploration (VSE), which instructed NASA to "Extend human presence across the solar system, starting with a human return to the Moon by the year 2020, in preparation for human exploration of Mars and other destinations," among other objectives. As acknowledged in the VSE, significant technology development will be necessary to accomplish the goals it articulates. NASA's Exploration Technology Development Program (ETDP) is designed to support, develop, and ultimately provide the necessary technologies to meet the goals of the VSE. This book, a review of the ETDP, is broadly supportive of the intent and goals of the VSE, and finds the ETDP is making progress towards the stated goals of technology development. However, the ETDP is operating within significant constraints which limit its ability to successfully accomplish those goals—the still dynamic nature of the Constellation Program requirements, the constraints imposed by a limited budget, the aggressive time scale of early technology deliverables, and the desire to fully employ the NASA workforce. Industry Interactive Innovations in Science, Engineering and Technology Swapn Bhattacharyya 2017-07-20 The book is a collection of peer-reviewed scientific papers submitted by active researchers in the International Conference on Industry Interactive Innovation in Science, Engineering and Technology (I3SET 2016). The conference is a collective initiative of all departments and disciplines of JIS College of Engineering (an autonomous institution), Kalyani, West Bengal, India. The primary objective of the conference is to strengthen interdisciplinary research and encourage innovation in a demand-driven way as desired by the industry for escalating technology for mankind. A galaxy of academicians, professionals, scientists, industry people and researchers from different parts of the country and abroad shared and contributed their knowledge. The major areas of I3SET 2016 include nonconventional energy and advanced power systems; nanotechnology and applications; pattern recognition and machine intelligence; digital signal and image processing; modern instrumentation, control, robotics and automation; civil engineering and structural design; real-time and embedded systems, communication and devices; advanced optimization techniques; biotechnology, biomedical instrumentation and bioinformatics; and outcome based education.

Josef Stefan: His Scientific Legacy on the 175th Anniversary of His Birth John C. Crepeau 2013-02-20 Most scientists and engineers are familiar with the name Josef Stefan primarily from the Stefan-Boltzmann law, which relates the amount of energy transferred by radiation to the absolute temperature raised to the fourth power. Stefan determined this law from experimental data, and it was later theoretically verified by his former student, Ludwig Boltzmann. However, it is interesting to know that this is the same Stefan who lent his name to the solid-liquid phase change problem, and concepts related to molecular diffusion and convective motion driven by surface evaporation or ablation. Stefan counted among his students Sigmund Freud, who was so inspired by his physics instructor that he incorporated scientific methods into psychoanalysis. This invaluable book details not only Josef Stefan's original contributions in these areas, but the current state-of-the-art of his pioneering work.

Review of NASA's Exploration Technology Development Program National Research Council 2009-01-12 To meet the objectives of the Vision for Space Exploration (VSE), NASA must develop a wide array of enabling technologies. For this purpose, NASA established the Exploration Technology Development Program (ETDP). Currently, ETDP has 22 projects underway. In the report accompanying the House-passed version of the FY2007 appropriations bill, the agency was directed to request from the NRC an independent assessment of the ETDP. This interim report provides an assessment of each of the 22 projects including a quality rating, an analysis of how effectively the research is being carried out, and the degree to which the research is aligned with the VSE. To the extent possible, the identification and discussion of various cross-cutting issues are also presented. Those issues will be explored and discussed in more detail in the final report.
