Academic Language/Literacy Strategies for Adolescents Debra L. Cook Hirai 2013-02 Fast-paced, practical, and innovative, this text for pre-service and in-service teachers features clear, easily accessible lessons and professional development activities to improve the delivery of academic language/literacy education across the content areas in junior/middle school and high school classrooms. Numerous hands-on tools and techniques demonstrate the effectiveness of content-area instruction for students in a wide variety of school settings, particularly English language learners, struggling readers, and other special populations of students. Based on a strong professional development model the authors have been instrumental in designing, **Academic Language/Literacy Strategies for Adolescents** addresses: motivation attributes of

academic language vocabulary: theory and practice reading skills development grammar and writing. A wealth of charts, graphs, and lesson plans give clear examples of academic language/literacy strategies in action. The appendices - a key component of the practical applications developed in the text - include a glossary, exemplary lessons that address key content areas, and a Grammar Handbook. In this era of increased accountability, coupled with rapid demographic change and challenges to traditional curricula and pedagogical methods, educators will find this book to be a great resource.

"Science, Technology, and Utopias " Christine Filippone 2017-07-05 The rise of proxy wars, the Space Race, and cybernetics during the Cold War marked science and technology as vital sites of social and political power. Women artists, historically excluded from these domains, responded critically, while simultaneously redeploing the products of "Technological Society" into works that promoted ideals of progress and alternative concepts of human community. In this innovative book, author Christine Filippone offers the first focused examination of the conceptual use of science and technology by women artists during and just after the women's movement. She argues that artists Alice Aycock, Agnes Denes, Martha Rosler and Carolee Schneemann used science and technology to mount a critique on Cold War American society as they saw it?conservative and constricting. Motivated by the contemporary American Women's Movement, these artists transformed science and technology into new modes of artmaking that transgressed modernist, heroic, painterly styles and subverted the traditional economic structures of the gallery, the museum and the dealer. At the same time, the artists also embraced these domains of knowledge and practice as expressions of hope for a better future. Many found inspiration in the scientific theory of open systems, which investigated "problems of wholeness, dynamic interaction and organization", enabling consideration of the porous boundaries between human bodies and their social, political and nonhuman environments. Filippone also establishes that the theory of open systems not only informed feminist art, but also continued to influence women artists' practice of reclamation and ecological art through the twenty-first century.
